Hosting Space Information

Hello Александр,

"ASP-1" hosting space has been created under your user account and below is the summary information for its resources.

- [Control Panel URL](#)
- [Hosting Space Overview](#)
- [Web](#)
 - [Limits](#)
 - [Name Servers](#)
 - [Web Sites](#)
 - [Temporary URL](#)
 - [Files Location](#)
- [FTP](#)
 - [Limits](#)
 - [FTP Server](#)
 - [FTP Accounts](#)
- [Mail](#)
 - [Limits](#)
 - [SMTP/POP3 Server](#)
 - [Mail Accounts](#)
 - [WebMail](#)
- [Databases](#)
 - [SQL Server 2014](#)
 - [MariaDB](#)
 - [Web management](#)

Control Panel URL

Control Panel URL	Username	Password
http://scp.realhost.pro	user5786	dzmypbsqrnuavhge8jft

Hosting Space Overview

General hosting space limits:

Disk Space, MB:	1024
Bandwidth, MB/Month:	Unlimited
Maximum Number of Domains:	1
Maximum Number of Sub-Domains:	0

Web

Limits

Maximum Number of Web Sites:	1
Web Application Gallery:	Enabled
Classic ASP:	Disabled

ASP.NET 1.1:	Disabled
ASP.NET 2.0:	Disabled
ASP.NET 4.0:	Enabled
PHP 4:	Disabled
PHP 5:	Enabled
Perl:	Disabled
CGI-BIN:	Enabled

Name Servers

In order to point your domain to the web site in this hosting space you should use the following Name Servers:

ns1.realhost.com.ua
ns2.realhost.com.ua
ns3.realhost.com.ua

You should change the name servers in domain registrar (Register.com, GoDaddy.com, etc.) control panel. Please, study domain registrar's user manual for directions how to change name servers or contact your domain registrar directly by e-mail or phone.

Please note, the changes in domain registrar database do not reflect immediately and sometimes it requires from 12 to 48 hours till the end of DNS propagation.

Web Sites

The following web sites have been created under hosting space:

<http://u-sail.com.ua>

* Please note, your web sites may not be accessible from 12 to 48 hours after you've changed name servers for their respective domains.

Files Location

Sometimes it is required to know the physical location of the hosting space folder (absolute path). Hosting space folder is the folder where all hosting space files such as web sites content, web logs, data files, etc. are located.

The root of your hosting space on our HDD is here:

C:\HostingSpaces\user5786

By default the root folder of any web site within your hosting space is built as following (you can change it anytime from the control panel):

C:\HostingSpaces\user5786\u-sail.com.ua\wwwroot

FTP

Limits

Maximum Number of FTP Accounts: 1

FTP Server

Your hosting space allows working with your files by FTP. You can use the following FTP server to access your space files remotely:

<ftp://91.238.103.67>

Also, you can use the following domain names to access your FTP server:

<ftp://ftp.u-sail.com.ua>

FTP Accounts

The following FTP accounts have been created under your hosting space and can be used to access FTP server:

Username	Password	Folder
user5786	dzmypbsqrnuavhge8jft	\

Mail

Limits

Maximum Number of Mail Accounts:	5
Maximum Number of Mail Forwardings:	5
Maximum Number of Mail Groups (Aliases):	5
Maximum Number of Mailing Lists:	5

SMTP/POP3 Server

Below is the IP address of your POP3/SMTP/IMAP server. You can always access your mailbox(es) using this IP address instead of actual POP3/SMTP/IMAP servers name:

91.238.103.67

Also, you can use the following domain names to access SMTP/POP3 server from your favourite e-mail client software:

mail.u-sail.com.ua

Mail Accounts

The following mail accounts have been created under your hosting space:

E-mail Username (for POP3/SMTP/IMAP/WebMail) Password

Webmail access

You can access you mail thought webmail interface:

<https://scp.realhost.pro/webmail>

Databases

You can create databases and database users on "Space Home -> Databases" screen in the control panel.

SQL Server 2014

Maximum Number of Databases:	1
Maximum Number of Users:	1

In order to connect to SQL Server 2014 from Management Studio, Enterprise Manager, Query Analyzer or other client software you can use the following SQL Server address:

<scp.realhost.com.ua>

You may also use SQL Server address above in your application connection strings, for example:

Classic ASP (ADO Provider=SQLOLEDB;Data source=<scp.realhost.com.ua>;Initial catalog=databaseName;User

Library) Id=username;Password=password;
ASP.NET (ADO.NET Library) Server=scp.realhost.com.ua;Database=databaseName;Uid=username;Password=password;

MariaDB

Maximum Number of Databases: 1

Maximum Number of Users: 1

In order to connect to MariaDB server you can use the following address:

scp.realhost.com.ua

You may also use MariaDB Server address above in your application connection strings, for example:

MySQL Connector/Net Server=scp.realhost.com.ua;Database=myDataBase;Uid=myUsername;Pwd=myPassword;

Web management

phpMyAdmin <https://scp.realhost.pro/phpmyadmin>

Adminer <https://scp.realhost.pro/adminer>

If you have any questions regarding your hosting account, feel free to contact our support department at any time.

Best regards,

RealHOST.
